

TGC GAME JAM 2026

LENAL

A short stylized 3D fantasy adventure built around exploration, absurd quests, and a comedic anti-twist.

Team Name	Winter Soldiers	Engine	Unity 6
Team Members	Lnv Lochan Ch Kaila Thakshith Pranav Reddy	Target Experience	~10-15 minutes

1. Game Concept

Lenal is a lightweight, stylized 3D fantasy adventure in which the player explores a small world and follows what appears to be a conventional heroic quest. The game deliberately builds the expectation of a meaningful fantasy adventure before turning that expectation into a joke.

The player moves through a compact forest and village, interacts with characters and objects, completes a ridiculous chicken-and-lantern task, and is eventually sent into a mysterious cave. The cave appears to promise a major discovery, but the final revelation is intentionally absurd.

2. Story & Gameplay Flow

	Stage	Description
01	Explore	The player enters a small stylized 3D forest/village environment and learns the basic movement and interaction.
02	Find the Old Man	An old man gives the player a simple request: find his missing chicken.
03	The Chicken	The player tracks down the chicken, which has taken the old man's lantern/light, and retrieves it.
04	The Cave	The old man sends the player into a nearby cave to complete an important-sounding task.
05	The Message	The cave is unexpectedly bright. After exploring, the player discovers a note: "YOUR WORK IS TO GO BACK TO THE OLD MAN."
06	The Punchline	The player returns to the old man's location. He is gone, leaving \$5 and a note: "TAKE YOUR MONEY NOOB!" The game ends.

3. Core Gameplay

- | | |
|---|--|
| <ul style="list-style-type: none">• Exploration: Move through compact forest, village, and cave environments.• Interaction: Talk to NPCs and interact with important objects, clues, and notes.• Simple action: A basic stick/tool can provide a small amount of interaction or light combat without becoming a full combat system. | <ul style="list-style-type: none">• Drag-based movement: The character is controlled through intuitive mouse/touch drag input, matching the intended browser-friendly experience.• Quest progression: A lightweight state-based quest system controls the sequence of objectives.• Environmental comedy: Visual details and misleading cave elements build expectations before the final joke. |
|---|--|

4. Theme Integration

COMIC	Comedy drives the experience: an old man needs his chicken, the chicken has taken his lantern, the player is sent on an unnecessarily mysterious cave mission, and the final reward is a deliberately ridiculous \$5 and “TAKE YOUR MONEY NOOB!”
LIGHT	The game is intentionally lightweight in scope: a compact world, a small cast, simple interactions, minimal combat, a focused quest line, and an approximately 10–15 minute playtime.
TWIST	The game continuously suggests that the cave contains an important secret or task. Instead, the player finds a message telling them to return to the old man, only to discover that he has disappeared and left a small cash reward and a mocking note. The twist is a comedic anti-climax.

5. Visual & Technical Direction

The game will use a stylized low-poly 3D visual direction rather than realistic graphics. The player will be clearly visible in a controlled third-person/cinematic camera, with atmospheric skies, trees, rocks, paths, village structures, lighting, and simple environmental effects. The world will be deliberately compact so visual polish can be prioritized over scale.

Engine	Unity 6	Language	C#
Platform	Browser / WebGL, with itch.io deployment planned	Input	Mouse/touch drag-based movement and interaction
Systems	Player movement, camera, interaction, dialogue, quest state, simple action, scene transitions, ending sequence	World	Forest, village, cave

6. Scope & Development Plan

- Small interconnected world: one forest/village area and one compact cave, with controlled transitions.
- Focused mechanics: movement, interaction, dialogue, a simple tool/action, and quest progression.
- No unnecessary RPG systems: no leveling tree, crafting system, large inventory, branching campaign, or large enemy roster.
- Polish priority: atmosphere, readable environments, funny dialogue, sound cues, animation, and the final timing of the punchline.
- Jam-first development: the project will use a fresh codebase and be developed incrementally during the 100-hour jam.

8. Asset & AI Disclosure

The team will use only permitted assets and will maintain attribution/source information for third-party assets where required. Paid assets will not be used. AI tools may be used during development for ideation, programming assistance, debugging, dialogue refinement, and/or asset creation; such use will be disclosed in the project documentation in accordance with the jam requirements.

“A heroic quest. A mysterious cave. An old man. A chicken. Five dollars.”

Submission intent: A compact, polished browser-playable game that satisfies the COMIC + LIGHT + TWIST themes through a deliberately simple story with a strong comedic ending.
