

LENAL

A short stylized 3D Indian village adventure built around exploration, absurd quests, and a comedic anti-twist.

Team Name	Winter Soldiers	Engine	Godot 4
Team Members	Lnv Lochan Ch; Kaila Thakshith Pranav Reddy	Target Experience	~10–15 minutes

1. Game Concept

LENAL is a lightweight, stylized 3D adventure set in a compact Indian village, forest, landmark/temple route, and cave. The player follows what appears to be a straightforward heroic quest, but the game deliberately builds that expectation before turning it into an absurd joke.

The player explores the village, meets an old man, follows and catches a chicken carrying his lantern, returns the lantern, and is then sent into a mysterious cave. The cave is unexpectedly bright and staged like the beginning of an important discovery. The final message sends the player back to the old man, who has disappeared and left only money and a mocking note.

2. Level Structure & Current Scope

The submission is **one complete, self-contained level/experience**. It is not divided into separate gameplay levels. The connected areas form one continuous sequence from the opening exploration to the final punchline.

01	Village / Forest	Enter the stylized world, learn movement and interaction, and explore the compact environment.
02	Old Man	Find the old man and enter a short comic dialogue sequence.
03	Chicken Chase	Follow the chicken through the village route; it has taken the old man's lantern.
04	Lantern Recovery	Catch the chicken, retrieve the lantern, and return to the old man.
05	The Cave	Enter the nearby cave; its brightness and staging suggest a major discovery.
06	The Message	Find the note: "YOUR WORK IS TO GO BACK TO THE OLD MAN."
07	The Ending	Return to the old man's location; he is gone. \$5 and "TAKE YOUR MONEY NOOB!" remain.

3. Core Gameplay

- **Exploration:** Move through the connected village, forest, landmark/temple route, and cave.
- **Interaction:** Talk to NPCs and interact with important objects, clues, the lantern, and notes.
- **Chicken chase:** Follow and catch the animated chicken to recover the lantern.
- **Quest progression:** A lightweight state-based progression system controls objectives and story beats.
- **Comic dialogue:** Stylized dialogue cards present NPC conversations and temporarily control player movement during key conversations.
- **Environmental comedy:** Village details, misleading cave staging, and the timed ending reinforce the comedic tone.

3. Core Gameplay (continued)

- **Third-person movement and camera:** Smooth character movement, sprinting, jumping, and an orbiting third-person camera with collision handling.
- **Simple action:** A basic stick/tool provides limited interaction without becoming a full combat system.
- **Restart / pause:** The pause menu supports resume, restart, settings, and returning to the main menu.

Controls

W, A, S, D	Move
Shift (hold)	Run / sprint
Space	Jump / advance dialogue
Mouse	Orbit third-person camera
E / Space / Left Click	Interact / advance dialogue
Esc	Pause menu

4. Theme Integration

COMIC — Comedy drives the experience: an old man needs his chicken, the chicken has taken his lantern, the player is sent through an unnecessarily serious quest, and the final reward is a deliberately ridiculous \$5 and “TAKE YOUR MONEY NOOB!”

LIGHT — The game is intentionally lightweight in scope: one compact connected world, a small cast, simple interactions, limited action, a focused quest sequence, and an approximately 10–15 minute playtime.

TWIST — The cave is presented as if it will contain an important discovery. Instead, the player finds a message telling them to return to the old man, only to discover that he has disappeared and left a small cash reward and a mocking note. The twist is a comedic anti-climax.

5. Visual & Technical Direction

The game uses a stylized low-poly 3D Indian village/forest aesthetic rather than realistic graphics. The world contains village houses and props, a market/tea-stall area, vegetation, a temple/landmark route, paths, and a compact cave. The player is presented through a controlled third-person camera with readable environmental staging.

Engine	Godot 4
Language	GDScript
Renderer	GL Compatibility
Platform	Browser / Web export target, with itch.io deployment planned; desktop development/testing
Input	Keyboard + mouse: WASD, Shift, Space, E/click, camera orbit, Esc
Systems	Player movement, camera, interaction, dialogue, quest state, chicken chase, lantern recovery, cave sequence, ending sequence
World	Connected village, forest, landmark/temple route, and cave

6. Development Scope & Commitment

- **Single-level experience:** The submission focuses on one complete, self-contained playable experience containing the full story sequence.
- **Compact connected world:** One village/forest region, landmark/temple route, and one cave are connected into the same experience.
- **Focused mechanics:** movement, camera, interaction, dialogue, chicken chase, lantern recovery, quest progression, and the ending sequence.
- **No unnecessary RPG systems:** no leveling tree, crafting system, large inventory, branching campaign, or large enemy roster.
- **Polish priority:** readable environments, stylized presentation, funny dialogue, sound cues, animation, and timing of the final punchline.
- **Jam-first scope:** the project prioritizes completing and polishing the defined experience rather than expanding the story with additional levels.

8. Asset & AI Disclosure

Third-party assets: The project uses permitted third-party assets with attribution where required. Character rig/animation assets are from the Quaternius Universal Animation Library (CC0 / public domain). The project README records the asset source and license information.

Audio: The current build uses a procedural runtime audio/synthesis system for footsteps, jumps, landings, chicken sounds, UI sounds, lantern pickup, dramatic stings, and ambient music loops, avoiding external audio dependencies.

AI use: AI tools may be used during development for ideation, programming assistance, debugging, dialogue refinement, and asset-generation assistance. Any AI use relevant to the jam submission will be disclosed according to the jam's requirements. The team remains responsible for the final implementation and for ensuring that all submitted assets are permitted.

Submission / Experience

LENAL is intended as a compact, polished, browser-playable game for itch.io, while the current development project is maintained in Godot 4 with desktop testing. The complete experience is designed to be understood and finished in approximately 10–15 minutes.

“A heroic quest. A mysterious cave. An old man. A chicken. Five dollars.”

Submission intent: A compact, polished single-level experience that satisfies the COMIC + LIGHT + TWIST themes through a deliberately simple sequential adventure.
